

AMS-2000

COAL DUST SUPPRESSANT & COAL QUALITY SOLUTION

AMS-2000 provides residual secondary application treatment to reduce material degradation and extend material quality assurance timeframes.

- Water added to coal piles leads to extra Water needing to be evaporated and causes the phenomenon heat of wetting - Spon Com process.
- Residual Material QC applications.
- AMS 2000 lasts 5-45 days

FEATURES:

- AMS 2000 is a Polynaphtha solution for coal that provides moisture and cooling stability for dust control and coal quality
- Protection from spontaneous combustion occurrences and long-term coal cooling benefits
- The solution reduces the risk of "Heat by Wetting" (Water that comes in contact with coal acts as a catalyst that accelerates the oxidation process which causes the spontaneous combustion).
- The solution is applied at the LAST transfer point before material discharge

Votech Dust Suppression Solutions work well, are competitively priced and save water use and labor time onsite.
