

GBT GLIDER

The **GBT Gliders** utilizes breakthrough technology for superior traction and grip of your belt to help prevent damage and ripping from belt over-runs. Aqua-planing and slippage is virtually eliminated before of the water-shedding dispersal effect of the castellated rubber rings.

The main focus around the development of the Glider Tracker Rollers was on the "traction and grip" between the conveyor belt and the tracker roller. The friction between the conveyor belt and the tracker roller creates a "polishing and grinding" effect that ultimately leads to a smooth and slippery rubber surface on any tracker roller. This is also noted and prevalent on all rubber covered pulleys.

FEATURES:

- Grinded and Balanced with a zero run-out
- 600-1500MM Flat return
- Performs well in wet and dry conditions
- 25mm rubber outer shell provides extended life
- Replaceable bearings and seals
