

FLAKING STATION

Unroll conveyor belt efficiently for a faster install

Almex Engineers have designed a segmented flaking station framework that will flake out the conveyor belt from its manufacture reels for installation.

The Almex Flaking System is faster and requires less physical labour to prepare the belt resulting in less labour and less conveyor downtime.

The system framework can be easily assembled, disassembled, extended, relocated and stored and is simple to operate.

Your ROI will be months with the effort and time saving for large overland conveyor installs or changeouts.

Contact us to discuss your upcoming project and how we can assist.

FLAKING STATION is custom-made to your belt specifications.
