

SPLICING STATION

Custom-Engineered and Built Solutions for Overland Conveyor Belt Installs and Changeouts

Almex Global Service staff is comprised of Engineers, Belt Splicers and others with years of experience in the field.

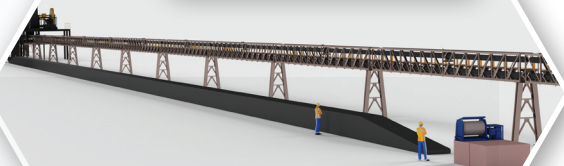

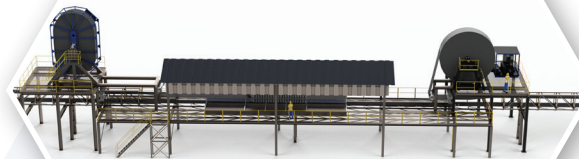

Our knowledge about what makes a quality splice is extended to what environment is most efficient and conducive to performing multiple splices, quickly and to the highest quality, for larger conveyor belt installations or belt changeouts, such as with overland conveyors.

Our staff will consult with you and custom design a Splice Station solution that will:

- Optimize conditions for Splicing; enclosed or covered splice areas, flat and level areas for splice preparation and Vulcanizing
- Configure belt stands and winders for efficient installs
- Recommend belt clamp and brake systems as required
- Recommend belt flaking solutions to speed up the installation and reduce manual labour

In addition to providing a custom-engineered solution for your project, Almex Global Services can also provide the equipment and staff to oversee your project.

Contact us to discuss your upcoming project and how we can assist.
